Unit in mm

HIGH EFFICIENCY ELECTRONIC VOLUME

The TC9176/77P is an electronic volume IC that has been developed for use on acoustic equipment. This IC is capable of controlling volume, balance, and loudness by externally inputting serial data.

- Volume control at 40 steps ranging from 0dB to -76dB at 2dB per-step and $-\infty$.
- Owing to the built-in 2 channels of L and R, which can be controlled independently, balancing is possible.
- Provided with the built-in loudness ON/OFF control function (TC9177P only).
- Being in the high voltage C-MOS structure, a wide dynamic range and low distortion are realized.
- Operation by two power supplies (+,-) is possible, and serial data input operates at logic level (0~5V), so the interface with a micro computer is easily available.
- Package

TC9176P (without Loudness) 16 pins

TC9177P (with Loudness) 20 pins

T-77-21

DESCRIPTION OF OPERATION**SETTING OF ATTENUATION**

As for the TC9176/77P, optional attenuation level data should be input from the DATA, CK and ST terminals. This data consists of 20 bits.

(The TC9176P has no loudness control and therefore, the 3rd bit must be always at "1" level).

TC9176P

| | | | | | | | | | | | | | | | | | | | |
|-----------------|-----------------|-----|-----|------|------|------|------|-----|-------|-------|-------|-------|-------|-------|-------|-----|-----|-----|-----|
| L ^{ch} | R ^{ch} | "0" | 0dB | -2dB | -4dB | -6dB | -8dB | 0dB | -10dB | -20dB | -30dB | -40dB | -50dB | -60dB | -70dB | "0" | "0" | "0" | "1" |
|-----------------|-----------------|-----|-----|------|------|------|------|-----|-------|-------|-------|-------|-------|-------|-------|-----|-----|-----|-----|

TC9177P Loudness

| | | | | | | | | | | | | | | | | | | | |
|-----------------|-----------------|------------|-----|------|------|------|------|-----|-------|-------|-------|-------|-------|-------|-------|-----|-----|-----|-----|
| L ^{ch} | R ^{ch} | ON/ OFF | 0dB | -2dB | -4dB | -6dB | -8dB | 0dB | -10dB | -20dB | -30dB | -40dB | -50dB | -60dB | -70dB | "0" | "0" | "0" | "1" |
|-----------------|-----------------|------------|-----|------|------|------|------|-----|-------|-------|-------|-------|-------|-------|-------|-----|-----|-----|-----|

CK

For example, input of data (110010000100000001) sets attenuation level of -22dB.
1st and 2nd bit of the data are for L^{ch} and R^{ch} selection.

3rd bit is a loudness control ON/OFF bit for the TC9177P only and the loudness control is ON at "1" and OFF at "0". In case of the TC9176P, it is always "0".

4th~8th bits are for setting attenuation at 2dB/step and 9th~16th bits are for setting attenuation at 10dB/step.

17th~20th bits are chip select bits and both the TC9176P and TC9177P are selected only by (0001) and is never operated by other than (0001).

The infinite attenuation level is set by data of -78dB. Therefore, one step up from the infinity becomes -76dB. Every change to data that has been taken in is synchronized with rise edge of ST signal.

T-77-21

TC9176P, TC9177P

DATA, CK, ST INPUTS

The TC9176/77P is generally operated by (+) and (-) power supplies.

Owing to the built-in level shifter, the DATA, CK and ST terminals are operated by (+) power supply only. The input inverter for there 3 terminals have low input threshold voltage and therefore, there terminals operate at 5V logic level.

Input DATA, CK and ST at the following timings:

POWER SUPPLY

Though the TC9176P/77P is generally operated with two power supplies, use of a single power supply is possible. In this case, however, as operating voltage is decided by voltage between VDD and GND, it will become half of that of two power sources.

○ TWO POWER SUPPLY

○ ONE POWER SUPPLY

TC9176P, TC9177P

ATTENUATOR

T-77-21

The attenuator consists of diffusion resistor arrays and analog switches.

Attenuator 1 attenuator 0 ~ 70dB at 10dB/step, while Attenuator 2 attenuator 0 ~ 8dB at 2dB/step, total 0 ~ 76dB at 2dB/step is available.

If there is the possibility for input of excessive voltage, insert protective diodes as illustrated below.

AUDIO DIGITAL IC

TC9176P, TC9177P

T-77-21

LOUDNESS FUNCTION (TC9177P)

The TC9177P is provided with the loudness taps.

LOUDNESS ON

When 3rd bit of data is set to "1", the loudness switch LS₁ is turned ON and LS₂ is turned OFF, outputting -20 dB attenuation level to Loudness-1 and Loudness-2 terminals.

When a high/low-pass boost circuit is added externally to Loudness-1 and Loudness-2 terminals, it becomes possible to control loudness to -20dB or below.

LOUDNESS OFF

When 3rd bit of data is set to "0", the loudness switch LS₁ is turned OFF and LS₂ is turned ON. The external high/low-pass boost circuit does not operate and the loudness is thus OFF.
